THE RIGHT MATERIAL FOR EVERY PROFESSIONAL – NO MATTER WHETHER YOU WORK DIGITALLY, ANALOGOUSLY OR HYBRID.

For over 80 years, we have been synonymous with high-end prosthetics in the dental sector and offer a complete system for partial, full, hybrid and implant-supported prosthetics. No matter which way you choose for your workflow, we offer you materials for classic, hybrid or digital processing.

Today, modern dental technology is increasingly being shaped by digital transformation. As a result, the fabrication of removable dentures is also experiencing fundamental changes. We are also embracing this development with our expertise and applying our decades of knowledge to digital concepts. Discover the new range of UCAN Print, UCAN Mill and UCAN Design in this catalog.

Not only do we stand for high-quality materials, we also take pride in providing valuable knowledge transfer. With our in-house training facility, the Swiss School of Prosthetics (SSOP), we support you in finding optimal prosthetic solutions and in perfecting your technical skills.

Regardless of which type of fabrication you prefer, precise results are best achieved by combining craftsmanship with reliable materials.

CANDULOR – HIGH END ONLY.

SERVICES

WEBSHOP*

Our online Webshop makes it easy and convenient for you to shop via your PC or mobile terminal. No matter whether you enter the desired article using the search function or when browsing through our catalog. Our Webshop also offers a scan function that allows you to simply scan products for re-ordering. By using the Scan & Order module, you can either scan the barcodes from your tooth stocks or the UDI codes on the packaging to add the product to your shopping cart.

Have you already registered? If not, you can do so directly via our shop page.

shop.candulor.com

* The Webshop is currently available in Germany, Austria and the Netherlands.

TOOTH STOCKS SERVICE*

Would you appreciate to always have the right molds and shades in stock? Then maybe a tooth stock system might be just the right thing for you. Whether consignment stock or purchased stock, you decide which stock is right for you.

Simply ask our team or partners for advice.

candulor.com/de/zahnlager

* This service is only available in Germany, Austria and the Netherlands.

WEBSITES

You can find everything you need to know about our products and training programs on our two websites. The information provided here is always completely up to date. In addition it also features news from the company and gives current information on dates.

candulor.com

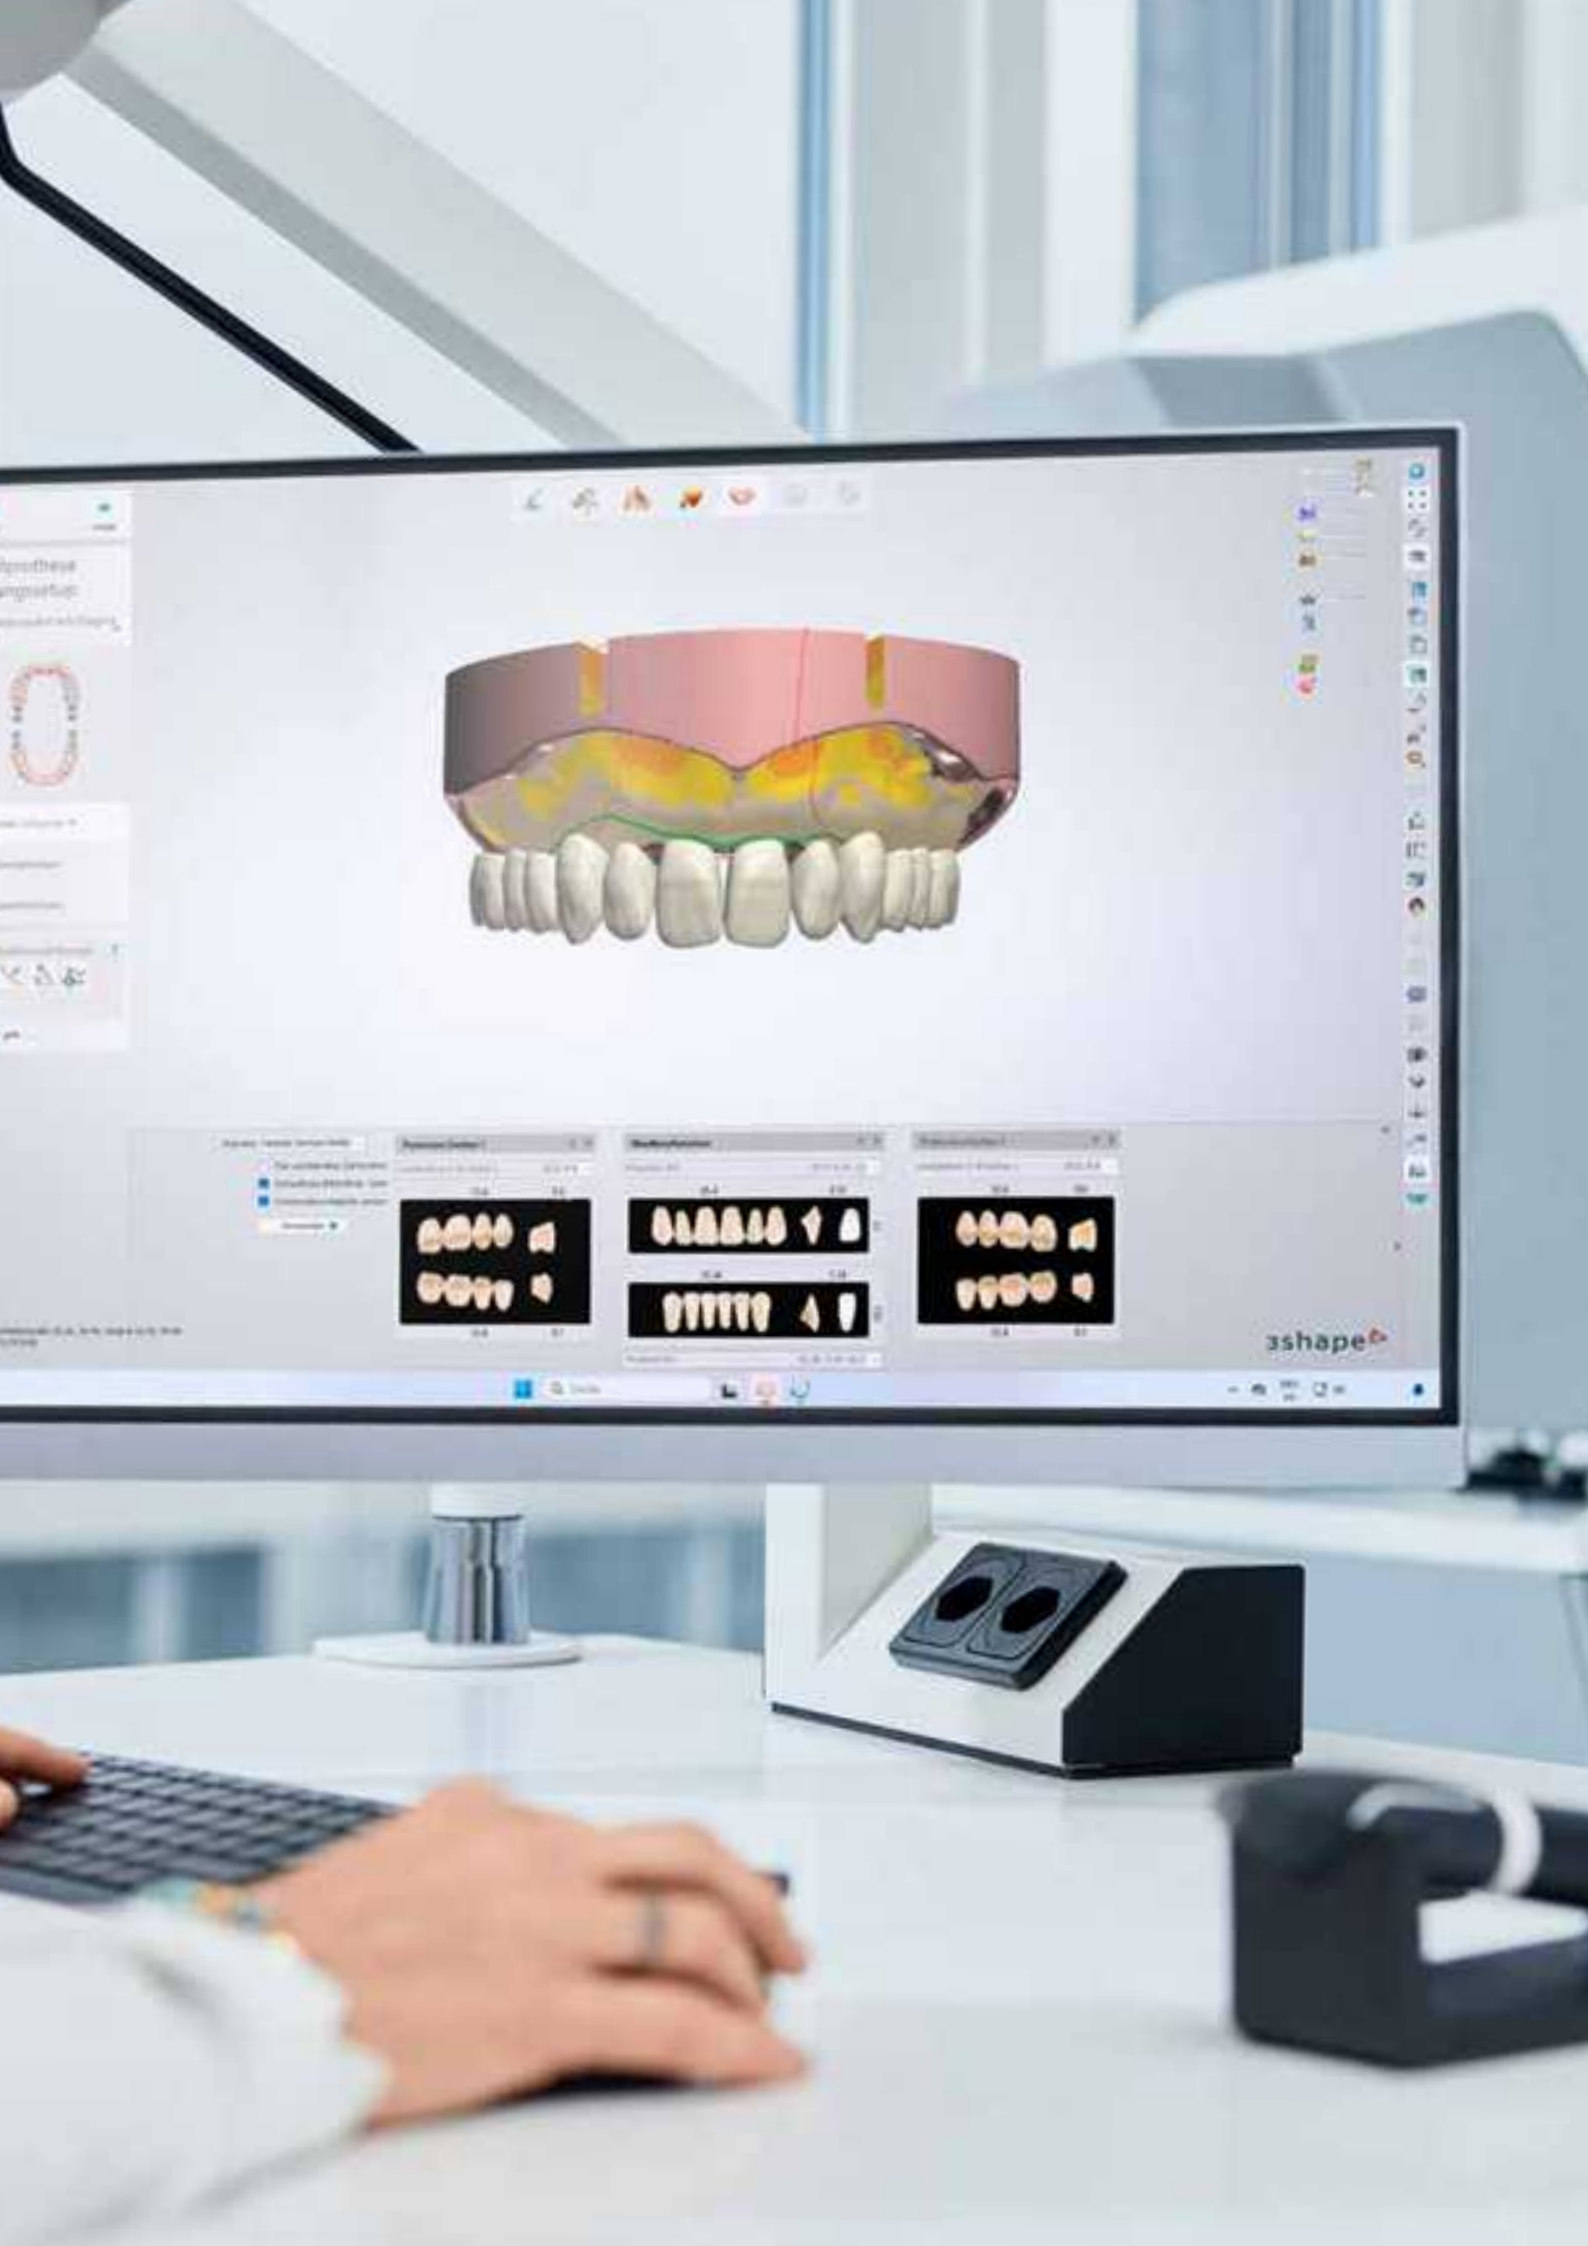
UCAN DESIGN
TOOTH DESIGN MADE BY CANDULOR

State-of-the-art CAD/CAM software combines tradition and decades of expertise in prosthetics with the opportunities offered by digitization.

The 3Shape Dental System™ CAD software can be used to digitally design a wide range of different types of restorations. Being a free system, 3Shape® offers a high level of flexibility as 3D models can be created regardless of the CAM equipment. At the same time, the new Candulor Denture SmileLibrary + offers access to one of the largest tooth libraries on the dental market.



CANDULOR DENTURE SMILELIBRARY +*
PROVEN EXPERTISE IN DIGITAL PRECISION

The Candulor Denture SmileLibrary + is available as part of the 3Shape® Dental System. It offers access to one of the largest tooth libraries, including predefined set-ups for full dentures. This means that no individual teeth are stored, but complete upper and lower full dentures in an occlusal relationship. This way, the software accesses an idealized set-up in the database, enabling you to quickly find the optimal solution.

Benefits

> 87 tooth molds: a comprehensive selection of anterior and posterior teeth in all available sizes
> 453 predefined set-up options of the angle class I
> Set-ups in the common occlusal schemes of Gerber, physiological, Gysi, lingualized and TiF
> Installation match in the multilayer structure of the TCR Multi disc

ORDERING DETAILS

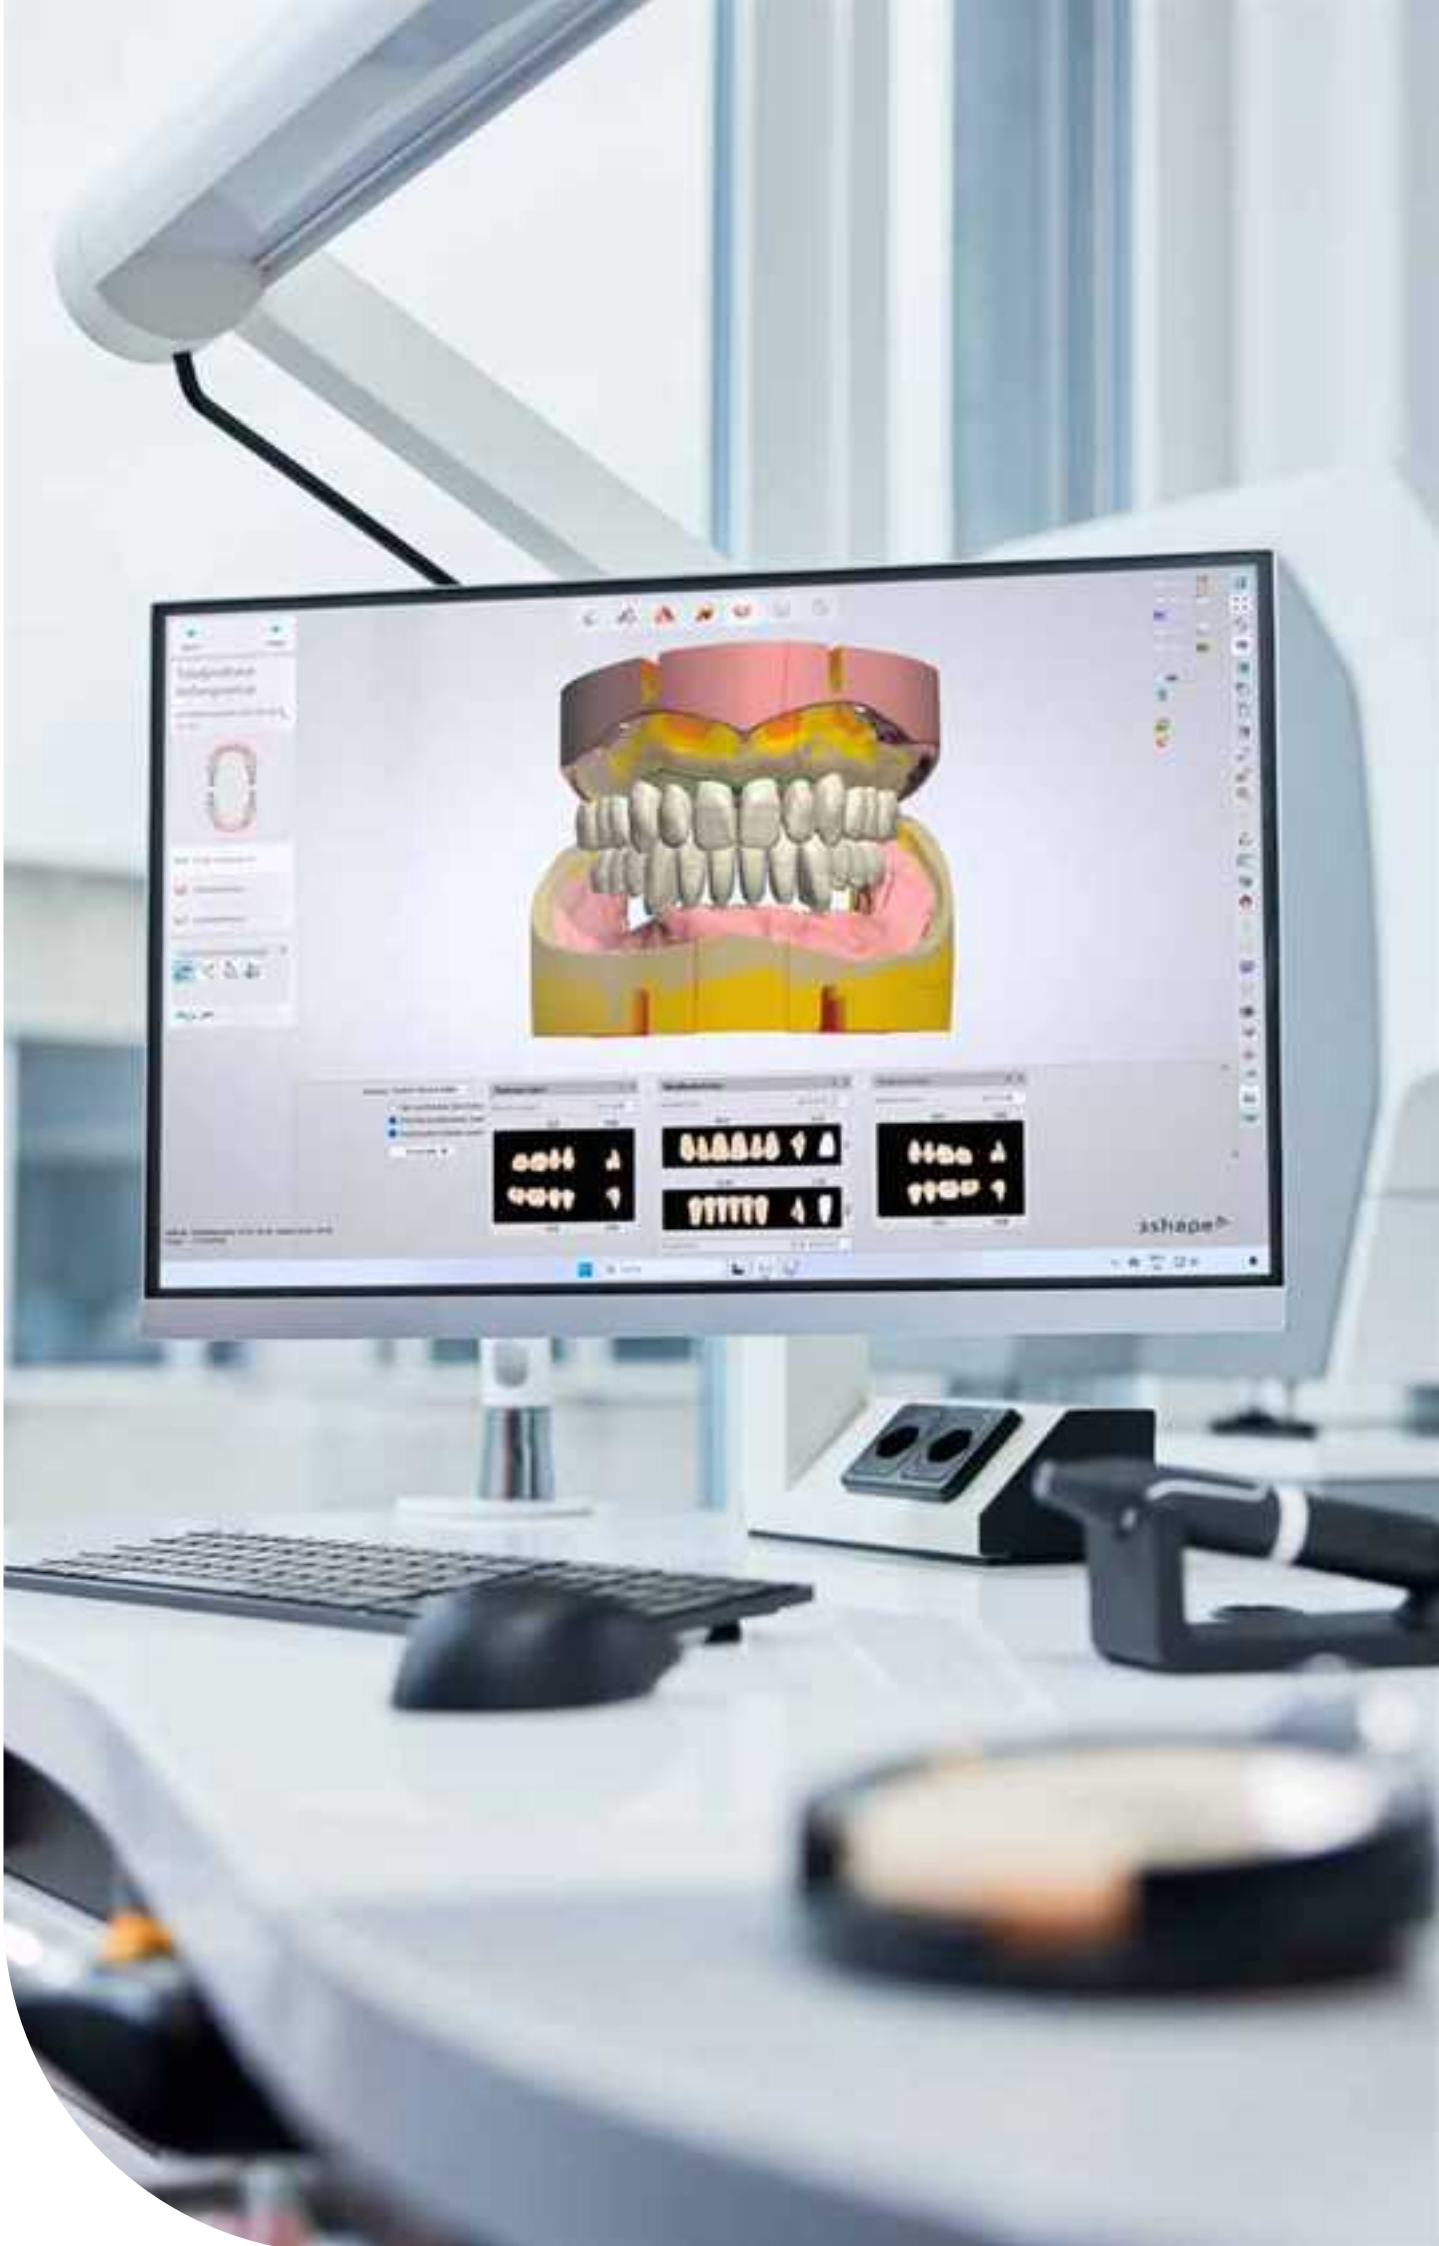
767988	Candulor Denture SmileLibrary +

* The Candulor Denture SmileLibrary + is currently available in Germany, the Netherlands and Canada (Ontario, Nova Scotia, New Brunswick, Prince Edward Island, Newfoundland, Labrador & Quebec).



UCAN PRINT*

3D PRINTING MATERIALS FOR DENTAL TECHNOLOGY

The high-quality and reliable products cover almost all production steps for removable dentures and ensure precise results: they enable the printing of models, the production of functional trays, as well as the production of try-ins and denture bases.

* All UCAN Print products are currently available in the EU and USA.

UCAN PRINT TRAY

UCAN PRINT MODEL
FOR MANUFACTURING OF DENTAL MODELS

UCAN Print Model is a 3D printing resin for the generative fabrication of dental models. It is characterized by high dimensional stability and the optimized look and feel for dental applications. Due to colorant and opacity the important features like margin lines are becoming perfectly visual.

Features
> High dimensional stability
> Optimized look and feel
> Easily implementable in the digital workflow
> Thermal stability

UCAN PRINT TRY-IN
FOR MANUFACTURING OF FUNCTIONAL TRY-INS

UCAN Print Try-In is suitable as base material for functional try-in of digitally fabricated denture bases as well as for check bite registration and occlusion.

Features
> High contrast
> Biocompatibility
> Increased impact strength
> TPO-free

UCAN PRINT SPLINT
FOR MANUFACTURING OF SPLINTS

UCAN Print Splint is a biomimetic 3D printing resin for the generative production of hard-elastic orthodontic splints. The material has a body temperature-induced thermo effect and thus ensures maximum wearing comfort in the mouth. It can also be used for manufacturing of mouthguards, nightguards, splints, repositioners and retainers.

Features
> Hard flexible
> Highest wearing comfort due to thermo effect

ORDERING DETAILS

All validated printer systems can be found on our website at candulor.com.

The technical specifications are included in the respective Instructions for Use.

UCAN PRINT TRAY
FOR MANUFACTURING OF IMPRESSION TRAYS

UCAN Print Tray is a 3D printing resin for the additive manufacturing of customized impression trays. This material is distinguished by its high reactivity, which enables build styles with up to 300 µm Z-height, thus ensuring optimal efficiency in the laboratory.

Features
> Approx. 50 % increased impact strength
> High reactivity
> Increased biocompatibility
> No reprotoxic labelling
> High safety
> TPO-free

UCAN PRINT BASE
FOR MANUFACTURING OF DENTURE BASES

UCAN Print Base is a specially developed 3D printing resin for fabricating denture bases using the additive method. It guarantees the low shrinkage (approx. < 1 %) compared to traditionally used PMMA-based materials a high accuracy of fit. In addition, the resin shows high-impact properties characterized by low viscosity.

Features
> High accuracy of fit
> High-impact material

UCAN MILL

MATERIALS FOR MILLED TOOTH ELEMENTS AND DENTURE BASES

UCAN Mill offers three different products in proven Candulor quality: the tooth-colored disks TCR Mono and TCR Multi as well as the gingiva-colored denture base disks XPLEX Base.

XPLEXBASE
XPLEXBASE
UCAN MILL
TCRMULTI
TCRMULTI
UCAN MILL

UCAN MILL TCR MONO
FOR MILLED TOOTH SEGMENTS IN PROVEN QUALITY

TCR Mono is a tooth-colored, monochromatic stained disk for the CAD/CAM technology. The disks are made of TCR material (TwinCrossedResin), which has been available on the market for over 40 years. TCR material is a highly modified type of polymethyl methacrylate (PMMA) variant in which both the polymer and the matrix are evenly cross-linked.

Thickness: 20 mm
Diameter: 98.5 mm

Shade range
A1, A2, A3, A3.5, B1, B3, C2, D2, BL3

Feature
> Good abrasion and good plaque resistance

Types of restorations
> Full dentures
> Partial dentures
> Implant-supported dentures
> Tooth-supported dentures

UCAN MILL TCR MULTI
FOR MILLED TOOTH SEGMENTS WITH HIGH DEMANDS ON ESTHETICS

TCR Multi is a multichromatic colored disk consisting of three layers. It features a harmonious color gradient to achieve a high level of esthetics in the individually milled tooth segments without subsequent characterization. With the tooth lines PhysioSet® TCR and PhysioSelect® TCR, which also consist of the proven TCR material, hybrid works can be created from a single material family.

Thickness: 20 mm
Diameter: 98.5 mm

Shade range
A1, A2, A3, A3.5, B1, B3, C2, D2, BL3

Features
> Highly esthetic due to natural translucency
> Appealing surface design and harmonious color gradient

Types of restorations
> Full dentures
> Partial dentures
> Implant-supported dentures
> Tooth-supported dentures

UCAN MILL XPLEX BASE
FOR MILLED DENTURE BASES IN HIGH-IMPACT QUALITY

XPLEX Base is a PMMA disk for fabricating denture bases for removable dentures using the abrasive manufacturing process. The disks are made of the proven XPLEX material, a high-impact modified PMMA with high-impact quality.
A denture fabricated with XPLEX Base can be repaired, extended and relined with a conventional cold-curing polymer (e.g. XPLEX Cold). Candulor teeth can be bonded with XPLEX Bond.

Thickness: 30 mm
Diameter: 98.5 mm

Shade range
1 Soft Pink – transparent, not veined
5 Pink – transparent, veined
34 Original Pink – semi-opaque, veined

Features
> High-impact strength
> Low plaque adhesion and discoloration

Types of restorations
> Full dentures
> Partial dentures
> Implant-supported dentures
> Tooth-supported dentures

ORDERING DETAILS

UCAN Bond XPLEX Bond *1 set*

Art. no.	Product
756225	UCAN Bond XPLEX Bond incl. 10 × XPLEX Bond polymer (2.7 g) 10 × XPLEX Bond monomer (1.9 ml) 1 × XPLEX Bond Modelling Liquid (5 ml) 10 × Application syringes (1 ml) 10 × Cannulas (1.5 mm)

UCAN BOND XPLEX BOND
BONDING MATERIAL

XPLEX Bond is a PMMA-based composite material for bonding resin-based teeth and segments into a prefabricated denture base.
The kit contains 10 pre-dosed monomer and polymer bottles to achieve an optimal mixture.

Feature
> Self-curing

Applications
> Connecting prefabricated teeth with a milled or printed base
> Connecting milled teeth with a milled or printed base

TOOTHLINES
DESIGNED TO CAPTURE PEOPLES' IMAGINATION

The CANDULOR tooth lines have always aimed at capturing peoples' imagination. Natural authenticity – with its exceptional esthetics, color stability and function – makes our tooth lines extremely versatile with every material.

A3 PhysioSelect® TCR 76S
A3 PhysioSelect® TCR 64

PHYSIOSTAR® NFC+

THEIR SURFACE TEXTURE,
LAYERING AND COLOR EFFECT
MAKE THEM UNIQUE.

The NFC+ material impresses with its very good abrasion resistance, which is significantly higher than that of the tooth materials previously used by Candulor. The particularly abrasion-resistant NFC+ material was developed to counteract premature wear of teeth and the associated vertical loss of dimension.

Material
NFC+ is a composite based on a urethane dimethyl acrylate matrix (UDMA matrix) composed of various types and sizes of fillers as well as PMMA clusters. This results in very good physical material properties, such as abrasion resistance and shear strength.

Layering
Close attention to give a natural appearance has also been a feature of the layering and esthetics. The material is built-up in four layers, which guarantees colorfastness in the mouth and gives a particularly natural appearance.

PHYSIOSELECT® TCR

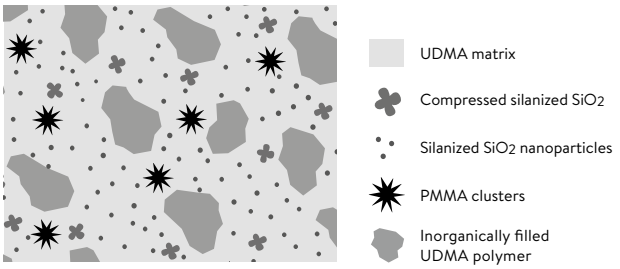
A LARGE VARIETY OF YOUNG,
AUTHENTIC MOLDS FOR THAT
YOUTHFUL FEELING.

The highly cross-linked TCR material is noted for its material and resistance properties.

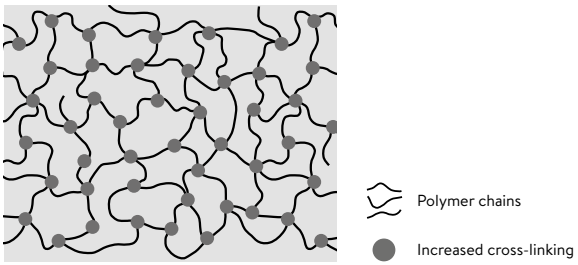
Material
TCR acrylic (TwinCrossedResin) is a highly modified type of polymethyl methacrylate (PMMA) variant in which both the polymer and the matrix are evenly cross-linked. This is done by again cross-linking the previously cross-linked polymer with the matrix in the production process. This ensures good abrasion resistance and resistance to plaque.

Layering
The PhysioSelect® TCR is a composition of slightly translucent incisal contours with diskreet mamelons and marginal ridge effects paired with a lively 4-fold layering and incisal light refraction. The surface structure gives the tooth a natural, youthful refraction of light.

NANOFILLEDCOMPOSITE
Composite material with a homogeneous distribution of inorganic fillers and PMMA clusters



TWINCROSSEDRESIN
Highly cross-linked PMMA network with increased cross-linking of the polymer chains



PHYSIOSET® TCR

EXCEPTIONAL VARIETY OF TYPE-SPECIFIC TOOTH MOLDS AND A VERY SPECIAL SURFACE PROFILE.

The double cross-linked TCR material has good material and resistance properties.

Material
TCR acrylic (TwinCrossedResin) is a highly modified type of polymethyl methacrylate (PMMA) variant in which both the polymer and the matrix are cross-linked. This is done by producing highly cross-linked polymer in combination with cross-linked matrix. This ensures good abrasion resistance and resistance to plaque*.

Layering
The appearance is achieved by the multi-layer process, life-like layering and the natural surface profile. With its two shade systems and the combination with good material properties, the TCR tooth line is suitable for both full dentures as well as partial and combined dentures.

* Abrasion resistance, clinical study over 2 years; plaque resistance measured in the laboratory

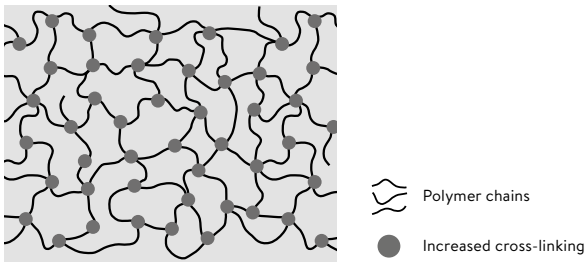
PREFERENCE® ACRYLIC

A COMBINATION OF NATURAL ESTHETICS AND HIGH USER-FRIENDLINESS.

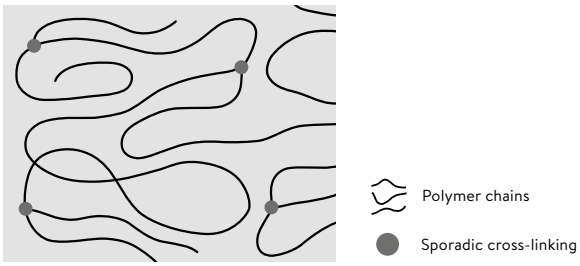
The Preference® tooth line is a combination of natural esthetics and user-friendliness. The proven PMMA material allows good bonding to prosthetic materials. The teeth have been selected for universal use in partial, full and combination dentures.

Material
The available PMMA polymers on the market have significant differences in purity, enclosed porosities and contamination. Consistent grain size and molecular weight are also deciding factors in the production of teeth with good and consistent quality.

TWINCROSSEDRESIN
Highly cross-linked PMMA network with cross-linking of the polymer chains



ACRYLIC
Proven PMMA network with less pronounced cross-linking of the polymer chains



PHYSIOSTAR® NFC⁺: Its surface texture, layering and color effect make it unique.

Its material formula of NanoFilledComposite® (NFC⁺) makes the PhysioStar® NFC⁺ stand out from other CANDULOR tooth lines.

PHYSIOSTAR® NFC⁺

Perfection begins where a tooth line feels as natural for the patient as his/her own teeth.
Color fastness, esthetics and shear strength – these are the strong points of PhysioStar® NFC⁺.

CONDYLOFORM® II NFC⁺

Prof. Dr. A. Gerber established the functional relationship between the shapes of the temporomandibular joints and the teeth and as a result, developed the Condyloform® tooth. The modern Condyloform II NFC⁺ offers anatomically good occlusion design with age-adapted morphological and natural occlusal proportions and functional areas. The mortar-pestle principle according to Prof. Dr. A. Gerber was also integrated into the masticatory surfaces. This results in autonomous chewing stability as the palatal cusp of the maxillary teeth engages into the opposing central fossa of the mandibular tooth.

BONARTIC® II NFC⁺

The occlusion morphology of the lower posterior teeth stands in relation to the condyle path. The inclination of the occlusional plane (Spee, Wilson) can be arranged individually and reliably with the Bonartic® II NFC⁺. It is the most important stabilizing element for every prosthetic restoration. The teeth were optimized in terms of a natural tooth to two-tooth relationship.

WORKING TOOTH MOLD GUIDE
WITH ANTERIOR AND POSTERIOR TOOTH MOLDS

The aluminum »working tooth mold guide« is composed of 15 maxillary and 5 mandibular sets as well as the two occlusion concepts Condyloform® II NFC⁺ and Bonartic® II NFC⁺. The guide serves to help select molds for the individual assessment and design of dentures in daily routine.

PHYSIOSELECT® TCR: A large variety of young, authentic molds for that new feeling.

The fresh, youthful design of the PhysioSelect® TCR was developed from the origin of proven tooth molds. The teeth, which are designed in Switzerland, are made of the reliable TwinCrossedResin material.

PHYSIOSELECT® TCR

The PhysioSelect® TCR is a composition of slightly translucent incisal contours with diskreet mamelons and translucent marginal ridge effects paired with a lively 4-fold layering and incisal light refraction.

A fine microstructure with horizontal growth grooves, plus a striking macrostructure with vertical ridges, grooves and fine openings gives the tooth a naturally youthful refraction.

BONSELECT TCR®

The new posterior BonSelect TCR® tooth was created to match the PhysioSelect® TCR – a posterior tooth with an occlusion concept that can be used multifunctionally for the most common setup systems.

Whether tooth-to-tooth or tooth-to-two-tooth, the BonSelect TCR® has a bifunctional tooth geometry that makes both setup systems possible. Simplified centric determination through defined contact points leads to an easily adjustable occlusion.

PHYSIOSET® TCR: Exceptional variety of type-specific tooth molds and a special surface profile.

Resin does not necessarily equal resin. As proven by CANDULOR with the TCR tooth line. The variety of molds results in a balanced assortment of type-specific tooth molds. The double cross-linked TCR (TwinCrossedResin) material has good material and resistance properties.

PHYSIOSET® TCR

The appearance is achieved by the multi-layer process, life-like layering and the natural surface profile. With its two shade systems and the combination with good material properties, the TCR tooth line is suitable for both full dentures as well as partial and combined dentures.

PHYSIOSET® TCR X-SHAPES**

The PhysioSet® TCR tooth line has been complemented with 18 new X-shapes made of the resistant TwinCrossedResin material which is plaque and abrasion resistant*.

BONARTIC® TCR

The Bonartic® TCR combines the physiological laws of nature and the esthetic-morphological demands into a good looking denture tooth.

> Tooth to two-tooth relationship
> ABC contacts – functional/ balance-sided/centric

* Abrasion resistance, clinical study over 2 years; plaque resistance measured in the laboratory

** These products are only available in North America.

WORKING TOOTH MOLD GUIDE
WITH ANTERIOR AND POSTERIOR TOOTH MOLDS

The aluminum »working tooth mold guide« is composed of 22 maxillary and 8 mandibular sets as well as the occlusion concept Bonartic® TCR. The guide serves to help select molds for the individual assessment and design of dentures in daily routine.

PHYSIOSET® TCR
SHADE GUIDE

The PhysioSet® TCR shade guide combines two shade systems. The most popular shades – 9 CANDULOR and 11 A – D shades – can be determined. The shade tabs are made of original TCR material which ensures shade conformity with the tooth sets.

The PhysioSet® TCR shade guide serves to determine the shade of:
> PhysioSet® TCR anteriors
> Bonartic® TCR posteriors

PREFERENCE® Acrylic: The combination of natural esthetics and high user-friendliness.

The proven PMMA material allows good bonding to prosthetic materials. The teeth have been selected for universal use in partial, full and combination dentures.

PREFERENCE® ACRYLIC ANTERIORS

The naturalness of the teeth is created by the three-layered, authentic shade design. The diversity in shapes enables that you can choose the appropriate tooth for your patient.

PREFERENCE® ACRYLIC POSTERIORS

The posterior teeth are easy to position owing to their defined centricity. Due to the functionally designed occlusion surface, these can be used multifunctionally for the most common set-up philosophies.

WORKING TOOTH MOLD GUIDE
WITH ANTERIOR AND POSTERIOR TOOTH MOLDS

The aluminum »working tooth mold guide« is composed of 15 maxillary and 5 mandibular sets as well as a Preference® Acrylic maxillary and mandibular posterior mold each. The guide serves to help select molds for the individual assessment and design of dentures in daily routine.

PREFERENCE® ACRYLIC
SHADE GUIDE

The Preference® Acrylic shade guide serves the selection of all 18 tooth shades of the Preference® Acrylic tooth line. You can now determine the tooth shade which matches your patient best individually from the 16 A – D shades. The integration of the two Bleach shades BL2 and BL4 extends the shade spectrum for the selection
of very bright tooth shades depending on the wishes of your patients.

The Preference® Acrylic shade guide serves to determine the shade of:
> Preference® Acrylic anteriors
> Preference® Acrylic posteriors

PLEXIGLASS TOOTH CABINET
FOUR DRAWERS

A space can always be found for this handy 4-drawer tooth cabinet made of plexiglass. With 2 inserts each for 33 anterior sets of teeth and 2 inserts each for 22 posterior sets of teeth, this storage unit ensures that 110 sets of teeth are always within easy reach.

ORDERING DETAILS

Plexiglass tooth cabinet *1 item*

Art. no.	Product
681813	Plexiglass tooth cabinet with 4 drawers 31 × 23 × 9.5 cm (L/W/H)
590501	Inserts, transparent, for anterior sets (max. 33)
664546	Inserts, transparent, for PHYSIOSTAR® NFC⁺ / PHYSIOSELECT® TCR anterior sets (max. 27)
590502	Inserts, transparent, for posterior sets (max. 22)

C-Box tooth cabinet *1 item*

Art. no.	Product
681814	C-Box tooth cabinet with 4 drawers 11 × 7.5 × 40 cm (H/W/D)
590501	Inserts, transparent, for anterior sets (max. 33)
664546	Inserts, transparent, for PHYSIOSTAR® NFC⁺ / PHYSIOSELECT® TCR anterior sets (max. 27)
590502	Inserts, transparent, for posterior sets (max. 22)

C-BOX TOOTH CABINET
FOUR DRAWERS

The C-Box design consists resistant powder-coated aluminum. The tooth cabinet with its 4 sturdy drawers provides space for up to 220 sets of teeth and can be stacked. The plastic inserts allow optimal presentation of the tooth sets so that the right set is always within easy reach. The label slots make it easy to label the handles. Clarity and functionality thus simplify finding the right set of teeth as well as the managing of tooth stocks.

TOOTH CABINET
SIX DRAWERS

The silver-colored sturdy metal housing makes for an attractive design in combination with the 6 red plastic drawers. The tooth cabinet is supplied with 3 inserts each for 90 anterior sets of teeth and 3 inserts each for 60 posterior sets of teeth, thus providing storage for 450 sets of teeth.

ORDERING DETAILS

Tooth cabinet *1 item*

Art. no.	Product

541651	Inserts, white, for anterior sets (max. 90)
541652	Inserts, white, for posterior sets (max. 60)

RESINS FOR DENTURES
THE MATERIAL DENTURES ARE MADE FROM

Every person has his/her very own natural gingiva. To replicate this as realistically as possible, our path led from transparent resins to specific semi-opaque pigmentation of the CANDULOR denture materials which refract and reflect incident light, thus making artificial gums appear in natural pink tones.

When artificial appearance cannot be distinguished from natural appearance, that is when we have achieved our goal. A broad range of shades with numerous hues gives us the opportunity of creating perfect customized mixtures for every customer.

XPLEX
SELF/HOT-CURING HIGH IMPACT DENTURE BASE MATERIAL

XPLEX – the high-impact polymer for dual use. Developed to cover the different processes and needs in the laboratory. The polymer is suitable for cold and hot polymerization. Whether packing, pressing or pouring: the choice of HOT or COLD processing is governed by the respective HOT or COLD monomer component.

To make individual characterization even simpler and quicker, the premixed colors were developed in three shades. For naturalness, shade 53 should be used for the marginal gingiva, shade 55 for the fixed gingiva and shade 57 for the alveolar mucosa.

Features
> High impact strength
> Good flow and modeling properties
> Good bond to denture teeth
> Good grinding and polishing properties
> Esthetic appearance
> Low adhesion of plaque and low tendency to diskoloration
> Easy dosing

Descriptions
> Complete denture prosthetics
> Partial denture prosthetics
> Implant prosthetics
> Repairs to XPLEX HOT can be performed with XPLEX COLD

Customizing colors
53 Whitish Pink – opaque, not veined
55 Reddish Pink – opaque, not veined
57 Brownish Purple Pink – opaque, not veined

AESTHETIC BLUE
SELF-CURING DENTURE BASE MATERIAL

Self-curing AESTHETIC BLUE excels in particular through its good flow and modelling properties. This assures simple processing by both the cast and packing technique, even in case of two or more saddles. Different opaque shades, pink transparent and clear are available.

To make individual characterization even simpler and quicker, the premixed colors were developed in three shades. For naturalness, shade 53 should be used for the marginal gingiva, shade 55 for the fixed gingiva and shade 57 for the alveolar mucosa.

Features
> Semi-opaque pigmentation
> Good flow characteristics
> Good fit
> Shape and color stability
> Physiological colors

AESTHETIC RED
HEAT-CURING DENTURE BASE MATERIAL

RED – the AESTHETIC heat-curing polymer displays the entire spectrum of the harmonious CANDULOR color system. This gives the option of recreating the natural perfection of the gingiva. Different opaque shades, pink transparent and clear are available. Processing, shape and color stability are standard for heat-curing denture base materials.

To make individual characterization even simpler and quicker, the premixed colors were developed in three shades. For naturalness, shade 53 should be used for the marginal gingiva, shade 55 for the fixed gingiva and shade 57 for the alveolar mucosa.

Features

> High accuracy of fit
> Physiological colors
> Low residual monomer content
> Wide range of polymerization variants
> Color stability
> Simple handling
> Semi-opaque pigmentation

AUTOPLAST
SELF-CURING DENTURE BASE MATERIAL

Let it flow
AUTOPLAST was developed specially for the overcast and flask technique. This self-curing polymer is distinguished by its good flow properties.

Modelling made easy
The flow phase was set at about 3 minutes. After a transient phase of 5 to 6 minutes, the material can be modeled for a further 3 minutes. This means that several saddles can be worked easily and correctly with the casting method.

Features
> Simple handling
> Good flow and modelling properties
> Long working time

BASEPLAST
HEAT-CURING DENTURE BASE MATERIAL

Simply uncomplicated
The heat-curing polymer BASEPLAST was developed to provide an easy and uncomplicated processing option. Particularly noteworthy is the short swelling time and the adequate working time. The swelled dough does not stick and offers good pressing behavior.

Features
> Good fit
> Natural shade effect
> Color stability
> Simple handling
> Low residual monomer content

AESTHETIC COLOR SET EASY MINI
STARTER SOLUTION

Whether HOT or COLD, this compact starter solution with three ready-mixed shades – analog to the AESTHETIC Color Wax range – allows the dental technician to easily, and above all quickly, produce individual pigmentation of the gingiva.

Applications
> Time-savings through premixed colors
> Matches CANDULOR AESTHETIC denture materials
> Characterization pattern

55 Reddish Pink – opaque, not veined
57 Brownish Purple Pink – opaque, not veined

AESTHETIC COLOR SET EASY
FOR INDIVIDUALISTS

AESTHETIC BLUE

AESTHETIC RED

Every patient is an individual, and this should be reflected by the dentures. Customized for the patient to give a natural and unmistakable authenticity.

4 different color hues allow individual pigmentation of the gingiva, easily and quickly. The incident light is refracted by the semi-opaque pigmentation and reflects. This gives the pink of the artificial gingiva a particularly natural look.

ORDERING DETAILS

AESTHETIC Color Set Easy *1 set*

Art. no.	Product
676793	4 × 100 g AESTHETIC BLUE Polymer (shades 34, 53, 55, 57), 150 ml AESTHETIC BLUE Monomer, 150 ml AESTHETIC BLUE LT Modelling Monomer, 8 × 15 g AESTHETIC Intensive Colors (shades white, blue, pink, red, orange, brown, black and yellow), 1 × 15 g AESTHETIC Intensive Colors Opaque, 1 Tin of fibres, 1 Shade guide, 1 Ceramic mixing tray, 1 Modelling Instrument, 1 Glass pipette, 2 Instructions for use, 1 Step by Step folder
676795	4 × 100 g AESTHETIC RED Polymer (shades 34, 53, 55, 57), 150 ml AESTHETIC RED Monomer, 150 ml AESTHETIC RED LT Modelling Monomer, 8 × 15 g AESTHETIC Intensive Colors (shades white, blue, pink, red, orange, brown, black and yellow), 1 × 15 g AESTHETIC Intensive Colors Opaque, 1 Tin of fibres, 1 Shade guide, 1 Ceramic mixing tray, 1 Modelling Instrument, 1 Glass pipette, 2 Instructions for use, 1 Step by Step folder

FIBRES
»VEINING« OF RESINS FOR DENTURES

The red fibres are incorporated into the denture base materials. This gives the gingiva a »veined« appearance and the dentures look natural.

Fibres *1 item*

Art. no.	Quantity
680284	0.5 g

AESTHETIC INTENSIVE COLORS
INDIVIDUALIZATION OF THE GINGIVA

AESTHETIC Intensive Colors for the pigmentation of CANDULOR denture base materials for individual, esthetic work. You can create very special accents with the color pigments, which can be dissolved in the monomer.
As special as your patient.

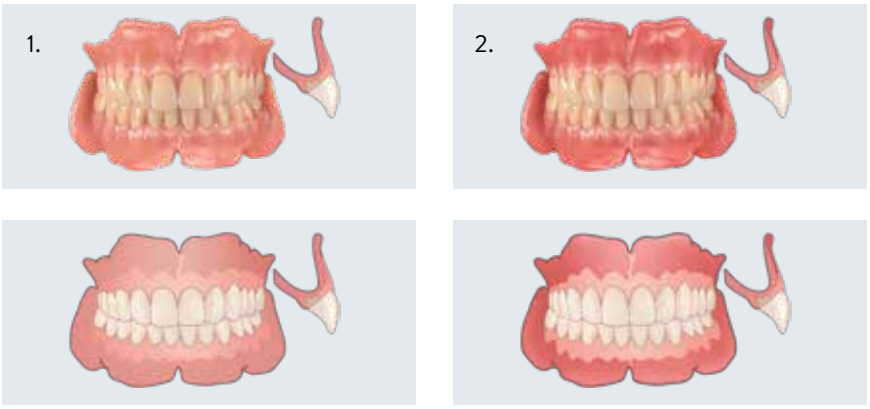
Applications
> Difference from natural gingiva hardly distinguishable
> Gingiva can be individually shaded to suit the patient

AESTHETIC INTENSIVE COLORS OPAQUE
GREATER OPACITY

This highly concentrated pigment is mixed as additional powder in small amounts to the AESTHETIC denture base material to achieve greater opacity. Another indication is the covering of thin acrylic layers in the cervical regions of the teeth and over metal parts.

Applications
> Greater opacity is achieved when customizing the denture base
> This reduces the visibility of metal parts, which is particularly beneficial in the case of partial or implant dentures
> Can be mixed with PMMA resins
> The powder dissolves easily and mixes well, thus ensuring simple handling
> The AESTHETIC Intensive Colors Opaque was specially formulated for use with CANDULOR AESTHETIC materials
> Can be mixed with hot- and self-curing polymers

Characterization with AESTHETIC BLUE and AESTHETIC RED



AESTHETIC LT MODELLING MONOMER
MORE TIME FOR CHARACTERIZATION

To obtain a longer modelling phase, you can use the AESTHETIC LT Modelling Monomer to organize your working time better and prevent the denture base material from drying out. It is suitable for use with AESTHETIC Intensive Colors.

Applications

> The denture base material offers enhanced modelling characteristics due to its smooth consistency
> This results in simpler handling when characterizing denture base materials
> Available for hot- and self-curing polymers

AUXILIARY MATERIALS
SPECIALISTS NEED THE RIGHT TOOLS

Our vision is to create a design which is equal to nature. We give dental technicians the tools to exploit the full range of options and to excel – like a musician composing a new melody.

KMG PASTE
HIGH-GLOSS POLISHING PASTE

KMG Paste is a high-gloss polishing paste for denture acrylics and metals. It is easily washed off and particularly economical to use.

Applications
> Precise application is possible due to presentation as paste
> Economical in use, therefore long-lasting
> Multifunctional use

ORDERING DETAILS

KMG Paste *1 item*

Art. no.	Quantity
686162	100 ml

KMG Liquid *1 item*

Art. no.	Quantity
693113	500 ml

KMG LIQUID
HIGH-GLOSS POLISHING LIQUID

The liquid KMG Liquid is a universal high-gloss polishing liquid for denture acrylics and metals.

Applications
> A faster high gloss result can be achieved.
> The product is easier to dose because it is not quite as fluid; thus providing a higher yield.
> KMG Liquid is a homogeneous liquid, therefore making it easier to use.
> It has a fresher color and a more pleasant aroma.

Indications
> High-gloss polishing of resin or composite veneers
> High-gloss polishing of resin saddles and resin parts of a prosthesis
> Metal restorations (e.g. inlays, onlays, cast crowns, etc.)

Contraindications
> Pre-polishing
> Compensation of major scratches and grooves
> Polishing of ceramic work and zirconium
> Application directly in the mouth

C-PLAST
SELF-CURING TRAY MATERIAL

C-PLAST in white and shade 34 is a dimensionally stable autopolymerizing resin that offers good contrast versus most impression materials. The material can be processed for approx. 5 minutes.

Description
> Individual impression tray
> Individual base plates for bite templates, intraoral registration plates, tooth setups with wax
> Preparation of individual anterior tooth guide plates

Indication
> For use in the treatment of partial or complete edentulism.

ORDERING DETAILS

AESTHETIC WAX
EVERYDAY AND MODELLING WAX

EVERYDAY WAX AESTHETIC WAX SOFT

AESTHETIC Wax Soft is noted for its smooth consistency.

Features
> Stained in shade 34
> Solidification point 56 °C

MODELLING WAX AESTHETIC WAX MEDIUM + HARD

AESTHETIC Wax is a special modelling wax in shade 34 for setting up prosthetics, available in two different degrees of hardness.

Features
> Medium degree of hardness and solidification point 80 – 81 °C (Medium)
> High degree of hardness and solidification point 84 – 85 °C (Hard)
> Stained in shade 34

ORDERING DETAILS

AESTHETIC Color Wax *1 item*

Art. no.	Quantity	Product
662473	3 × 8 g	AESTHETIC Color Wax Set

AESTHETIC COLOR WAX
CHARACTERIZATION OF WAX DENTURES

We offer 3 ready-mixed modelling waxes similar to the AESTHETIC Color Set Easy to enable the dental technician to design individual characterization of the wax denture.

To design a natural wax try-in, shade 53 should be used for the marginal gingiva, shade 55 for the fixed gingiva and shade 57 for the alveolar mucosa.

Features
> Matches CANDULOR AESTHETIC denture materials
> Gives the patient a feeling for the esthetics of the final product during the wax try-in

ISO-K
SEPARATING LIQUID

ISO-K is an alginate-based separating liquid with a proven success record. It is ideally suited for isolating denture base materials, i. e. PMMA resins of all kinds and plaster. This applies to both heat- and cold-curing polymers.

Application
> Isolation of plaster against resin

Features
> Excellent separation
> Readily absorbed into the plaster
> Very fine separating film

INSTRUMENTS
CLASSICS FOR EFFICIENT AND PRECISE WORK

CANDULOR instruments are practical aids to simplify daily routine. Matched to meet the needs of dental technicians and dentists they fully support high levels of commitment.

AESTHETIC
INTENSIVE COLORS

TECHNICAL INSTRUMENT SET
AUXILIARY SET FOR PROSTHETIC RESTORATION

The Technical Instrument Set contains all the implements needed for high-grade full dentures.

Content
> 1 Alameter
> 1 Modelling instrument
> 1 Artikont articulating ribbon
> 1 Sliding caliper
> 1 Rim Former
> 1 Profile compass
> 1 Papillameter
> 1 Instructions for use Alameter
> 1 Instructions for use Papillameter
> 1 Instructions for use Instrument Set

CLINICAL INSTRUMENT SET*
AUXILIARY SET FOR DENTISTS AND PROSTHODONTISTS

The Clinical Instrument Set is specifically designed for dentists and prosthodontists to facilitate their everyday work.

Content
> 1 CRS Set 10
> 1 CANDULOR Marker
> 1 Alameter
> 1 Sliding caliper
> 1 Rim Former
> 1 Papillameter
> 1 Bite fork set
> 1 Instructions for use Alameter
> 1 Instructions for use Papillameter
> 1 Instructions for use Instrument Set

* This product is **not** available within EU countries.

PROFILE COMPASS
TRACING THE CONTOUR OF THE ALVEOLAR RIDGE

Reproduction of the alveolar ridge ensures the correct placement of the teeth as the contour is still easily identified even after the wax template has been applied.

Application
> Marks the course of the alveolar ridge on the model

PAPILLAMETER
DETERMINATION OF THE LENGTH OF THE UPPER LIP

The lip closure line is one of the most important parameters especially when determining the length of the anteriors. The Papillameter provides the ideal tool for determining the length of the upper lip and thus the lip closure line.

Applications
> Accurate reading of lip length
> Simple determination of the length of the anteriors
> Sterilizable

RIM FORMER
MELTING WAX RIMS

The parallelism of the maxillary and mandibular wax bite is one of the most important prerequisites for correct bite registration. Uniform melting of the maxillary and mandibular bites is necessary, in particular for the parallelism of the wax rims to the Camper's plane.

Features
> Angled edge on the metal plate defines the dorsal height by applying to the Tuber maxillae
> Special openings at the rear end facilitate the diskharge of melted wax
> Well-insulated handle

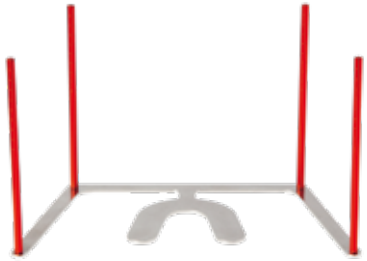
BITE FORK SET
CHECKING THE OCCLUSAL PLANE



The proven bite fork is available in a set with four vertical pins that can be unscrewed. The various planes can be clearly defined with the vertical pins and the rubber band. One of the most important parameters in prosthetics is the parallelism between the occlusal plane and Camper's plane or the bipupillary line. Additional reference planes such as the Frankfurt horizontal plane and the axial-orbital plane are also easily determined. The bite fork set is a reliable instrument for checking the correct position of the plane of occlusion.

Features
> Easy to use
> Sterilizable

ARTIKONT ARTICULATING RIBBON
FOR CHECKING OCCLUSION

The Artikont articulating ribbon is a double-sided marking articulating ribbon made of silk for checking occlusion on the model.

Features
> Available in three colors
> High tear resistance
> Marks repeatedly
> Easy handling
> Precision marking/ clear marking

MODELLING INSTRUMENT
MODELLING THE DENTURE'S GINGIVA

The handmade tips are well suited for modelling the denture's gingiva or the precise placing of wax and denture base material.

STIPPLING INSTRUMENT
PROCESSING THE SURFACE TEXTURE

The unique shape of the tungsten carbide stippling bur is exceptionally well suited for processing the surface texture of the denture's gingiva. It carefully carves the resin when forming the lip flange and achieves a natural surface structure.

SLIDING CALIPER
SELECTING ANTERIOR SETS

The sliding caliper can be used to determine the PhysioStar® NFC+, PhysioSelect® TCR and PhysioSet® TCR anterior sets.

ALAMETER
DETERMINING THE ANTERIOR SET

The Alameter is an aid for assessing the suitable anterior set of the PhysioStar® NFC⁺, PhysioSelect® TCR and PhysioSet® TCR tooth lines.

Many years of experience have shown that the alinasal width gives an indication of the original position of the canines and thus simplifies selection of the appropriate tooth set in edentulous patients.

The Alameter measures the width of the nose and calculates the most appropriate set of anteriors.

Features
> Easy to use
> Fast selection of anterior tooth set
> Can be used for the PhysioStar® NFC⁺, PhysioSelect® TCR and PhysioSet® TCR tooth lines

CERAMIC MIXING TRAY
FOR MIXING RESINS

The mixing tray in high-quality ceramic has 10 bowls for mixing resins plus a further four small bowls which can be used as monomer reservoirs and for handling the fibres.

Applications
> Specially designed for mixing resins
> The deeper bowls make mixing the resin particularly straight-forward
> Extremely smooth and scratch-proof surface – hardened resin is easily removed
> The sharp edges of the small bowls make it easy to scrape off the brush

DEVICES
DESIGNED TO GIVE THE BEST RESULTS

The CANDULOR devices give dental technicians the opportunity for best processing of the CANDULOR materials and to create fabrications of the highest quality.

AESTHETIC
COLD

ARTICULATOR CA 3.0

THE NAVIGATOR – NATURAL PROSTHETICS THROUGH THREE-DIMENSIONAL MOVEMENT

The challenge of creating highly esthetic patient work also calls for a natural function of the restoration. The CA 3.0 simulates the natural conditions of the jaw joint and thus offers excellent navigation for daily work.

The articulator excels through its double cone shape of the guided joint section. The technical construction of the articulator is designed to simulate three-dimensional natural movements, and these, in turn, are essential for physiological true-to-nature positioning.

The integrated Split-Cast system is a further distinguishing simplification. The magnets are integrated into the articulator. This allows for clean repositioning of the plates without corrosion and plaster deposits.

Technical data

> Height: 150 mm
> Width: 145 mm
> Weight: 690 g
> Inner construction height: 100 mm (with Split-Cast)
> Depth: 160 mm
> Bonwill triangle: 110 mm
> Balkwill angle: 25°
> Retrusion track: 1.5 mm
> Immediate side-shift stop: 0 – 2.5 mm fix
> Angle of jaw track adjustable between 0° – 60°
> Incisal plate: 15°
> Material: anodized aluminum

ORDERING DETAILS

Articulator CA 3.0 *1 item*

Art. no.	Product
668314	Articulator CA 3.0 with 1 Incisal plate 15°, 1 Incisal pointer, 2 Retention discs, 2 Mounting plates, 1 Supporting rod for upper part (opening stop), 2 Plastering covers, 1 Instructions for use

ARTICULATOR CA 3.0 LARGE
WITH ADJUSTED HEIGHT

The CA 3.0 LARGE articulator is a higher version of the CA 3.0. Together with the Plate Set for Splitex® and the Calibration Key, which is compatible with Splitex®, the CA 3.0 LARGE can be adjusted to the inner construction height of 126 mm and synchronized with the Artex® articulators of the Carbon series from Amann Girrbach.

Features

> Including Splitex® system same construction height as Artex® articulators of the Carbon series
> Synchronization of several articulators possible
> The double cone simulates the shape of the joint head
> Incorporated magnet
> Natural Bennet movement possible

Technical data

> Height: 160 mm
> Width: 145 mm
> Weight: 735 g
> Inner construction height: 126 mm (with Split-Cast)
> Depth: 160 mm
> Bonwill triangle: 110 mm
> Balkwill angle: 25°
> Retrusion track: 1.5 mm
> Immediate side-shift stop: 0 – 2.5 mm fix

POLYMASTER
SELF-CURING POLYMERIZATION

The POLYMASTER is a polymerization device for the casting/pressing technique using self-curing polymers. No acrylic flash is produced during processing, which means no more raised bites. The retention system incorporates a magnet. This ensures reliable repositioning of the model. The ease of investing the models makes for gentler handling and prevents incorrect pressing.

Material and Design
> Ergonomic Milani design
> Aluminum lightweight construction
> Precise conical closure

Features
> No more raised bites
> No flask clamp
> Simple handling
> Replaceable retention system
> 2 years guarantee on material defects (proper use is assumed)

Economic benefits
> Economical use of plaster
> Time saving of up to 25 minutes versus other press or injection processes

Technical data
> Weight: 1.8 kg
> Height: 9 cm
> Diameter: 13.5 cm

662546	Brass cover for lower part of the flask	1 item

JST FLASK
HEAT-CURING POLYMERIZATION

The JST flask was developed in collaboration with MDT Jürg Stuck. Three allen screws hold the two halves of the flask together, making the cumbersome flask clamp superfluous. Tapered steel guides center the upper and lower halves of the flask on each other to fit gap-free. When using AESTHETIC Intensive Colors (multicolor packing of the gingiva), incorrect pressing of the layer can be prevented by closing the flask asymmetrically.

Features
> Top and bottom halves screw together with no clamp required
> Sturdy material
> Generous inside diameter for large dentures and partial dentures
> High flask top section allows denture to be retained in an ideal position
> Conical inside surfaces to facilitate deflasking of the dentures
> Precise screw fit due to tungsten carbide screws and guide pins

REGISTRATION
ENSURING ESTHETICS AND FUNCTION

Determining jaw relationships is one of the most essential process in partial and full prosthetics. It represents an important link in the logic chain and determines how much time needs to be invested in the further work steps. Esthetics and function can be supported significantly through optimal registration.

CRS SET 10
CANDULOR REGISTRATION SET

Set for intraoral registration with relative bearings according to McGrane for full dentures
The registration set is used to record the joint-related central position of the mandible for full dentures.

CRS SET 15
CANDULOR REGISTRATION SET

Set for intraoral registration with relative bearings according to McGrane for dentulous or partially dentulous jaws and for check-up of full dentures
The registration set is designed for checking full dentures and for registration of the joint-related central position of dentulous and edentulous jaws.

ORDERING DETAILS

CRS SET 20
CANDULOR REGISTRATION SET

Opening and closing registration method
The registration set allows determination of the jaw relationship in dentulous and edentulous jaws. Smaller occlusal corrections of dentures can also be undertaken directly in the patient's mouth. It is, above all, suitable for patients having difficulty with movements and for patients requiring a lot of room for the tongue. It is also used as part of prosthetic measures and functional therapies.

696276	CANDULOR Marker

CANDULOR MARKER
WAX PENCIL FOR MARKING THE REGISTRATION PLATES

The CANDULOR Marker is ideal for marking the registration plates of the CRS sets. For this purpose the plates must be slightly warmed up (e. g. with a Bunsen burner, lighter, etc.) and can then be marked with the CANDULOR Marker. The wax pencil is water resistant and ideal for marking/labelling smooth surfaces such as metal, glass, cellophane and resins. The markings can be removed with commercially available disinfectants/wipes.

DENTURE BRUSH
FOR CLEANING DENTURES

The CANDULOR denture brush effectively cleans dentures. The large, flat bristle area provides optimum surface contact for thorough cleaning of the external arches. The smaller, wedge-shaped bristle area cleans less accessible parts of the internal arches. Teeth and denture acrylics can thus be thoroughly cleaned from deposits and the remains of food. The nylon bristle tips do not scratch denture bodies. The large, shaped handle makes control of the movement of the brush and denture cleaning easy. The ergonomic design of the handle with its non-slip grip make cleaning easy even for persons with restricted movement.

Features
> Thoroughly cleans and removes food residues and deposits
> Does not scratch tooth and denture surfaces
> Ergonomically shaped handle for control of brush movement
> The non-slip handle can be securely held, even if the brush is wet

SSOP (SWISS SCHOOL OF PROSTHETICS BY CANDULOR)

LEARNING, UNDERSTANDING AND APPLYING PROSTHETICS

With its comprehensive further education program on removable dentures, the SSOP offers new paths to prosthetic success in the laboratory and in the dental practice. To optimize professionalism and personal development.

EFFICIENT AND PROFESSIONAL TRAINING COURSES WITH THE SSOP

The SSOP is more than standard product or application training. The program offers comprehensive knowledge on removable dentures and makes you an expert step by step – both in theory and in practice with modules that build on each other.

Advantages

> Developing expertise in a highly interesting professional niche, regardless of whether you work analog, digital or hybrid
> Gaining routine, confidence and mastery in the realization of high-quality and sophisticated prosthetic restorations
> Achieving a high level of patient satisfaction due to successful solutions that offer a better quality of life

SSOP offers the right training

> No matter what previous knowledge you possess, from beginners to seasoned professionals
> No matter which professional field you are currently engaged in: be it as a dental technician trainee, dental technician, semi-skilled laboratory technician, prosthodontist or dentist

CREATING A NATURAL GINGIVA THROUGH CHARACTERIZATION

In this new workshop, »CREATING A NATURAL GINGIVA THROUGH CHARACTERIZATION«, the individual color design of a denture is demonstrated step by step and worked out in a practical manner. The focus is on the analysis of the different gingival layers and their specific color system. These are demonstrated and practiced with the preset CANDULOR colors 53, 55, 57 and the AESTHETIC Intensive Colors.

Program
> Demo - simple characterization with three colors
> Practical exercises of the participants
> Demo color analysis individual characterization gingiva colors and pigments
> Practical exercises of the participants
> Characterization demo in the PolyMaster
> Finishing and polishing
> Finishing with the PolyMaster
> Practical exercises of the participants
> FAQs / Discussion

Duration
Day 1

SSOP IN YOUR OWN LABORATORY

True to the motto »Bring the SSOP into your laboratory or practice«, the SSOP training program can also be booked as an in-house training course.
With the SSOP teachers on site, anatomical and prosthetic knowledge as well as craftsmanship are enhanced directly in the existing laboratory and practice process.

Advantages
> Staff can be supported with targeted training to make their daily work even more efficient. This adds to satisfaction, not only in the team.
> Existing materials and aids can be incorporated directly into the in-house training courses. This also allows processes to be optimized at the same time.
> In-house training involves less stress and time for the participants and is an effective cost-benefit option
